

HYGIENIC CONTROL VALVES

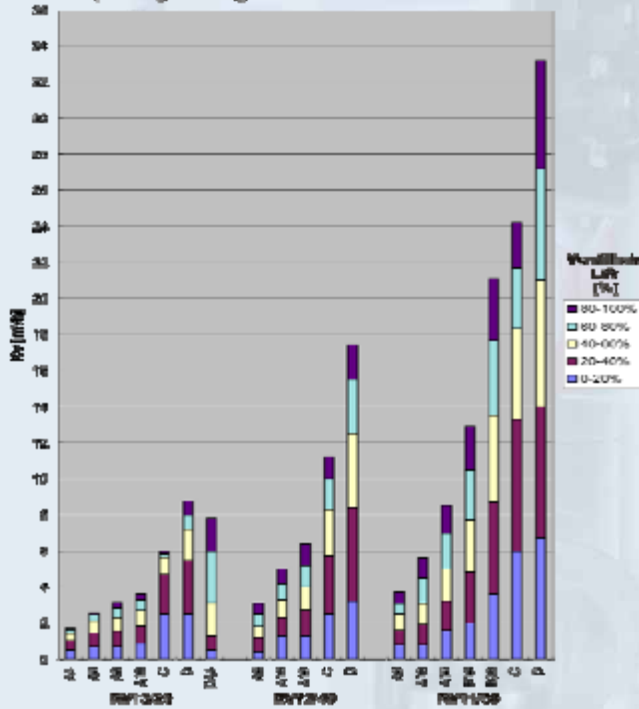

Fischer Hygienic Control Valves are especially designed for the food industry.

Their multistage design guarantees both low noise emission and soft pressure reduction. Just by changing the valve disk, different characteristics can be obtained with the same valve. Fischer Hygienic Control Valves are easily exchanged and have a long lifetime.

Leistungsbereiche Übersicht
Capacity-Range Overview

- **Multistage design**
 - low noise emission
 - soft pressure reduction
- **Different characteristics per valve**
 - easy change of valve disc
- **Change of valve disc in assembled condition**
 - only disconnecting the inlet connection required
- **Easy maintenance**
 - Easy seal changing
 - low maintenance rate
- **Suitable for food**
 - developed for food industry
- **CIP - able**
